The ADC has 2 independent and auto zeroed channels and can operate from 0.25 - 2.5V (less than or equal to 5VDC). For more information on ADC operation and input voltage ranges, click the following link. EC1700-PV Special model . This model uses the microSD card as a buffer, so it can run from 1.0 V to 5.0 V. This model has two independent and auto-zeroed channels and can operate from 0.25-2.5V (less than or equal to 5V DC). For more information on ADC operation and input voltage ranges, click the following link.

Q: Optimizing performance for submitting information to MySQL I have a form that submits to a MySQL database on my server. I have a ton of fields in the form and at any given time the user has the ability to fill out a small percentage of the fields. The end goal is to submit the form and get a response as quickly as possible. I am open to the possibility of using the PHP Data Objects but it seems very slow in comparison to using direct insert into. The user will fill out about 60-70 fields with 3-4 inputs each. The average amount of data entered per field is somewhere around 50 characters. The amount of data can and will change. Does anyone have any suggestions or optimizations that can be done with the current implementation or would you recommend a different approach? I can put the php script on a free hosting site if needed. I was also thinking about using SQLite for data storage, but was wondering if I would gain anything performance wise.

A: You could create a large number of DIVs with a hidden input for each field, and then populate them all when the form is posted. That way, the form is not a large block of text (you know that's not the best way to do it) and will be more quickly parsed. Or, if you're stuck with using POST, you could create the data in a Javascript object and use jQuery's data() method to set it into the form fields. That way the data is ready when the form is submitted. That might be a more acceptable solution if you're worried about overhead.

Send this page to someone via email Canadian Forces say they are investigating an incident involving an aircraft and a person on Mount Saint Helens in Washington state that resulted in the death of a member of the U.S 82157476af
